

Seminar/Project: BAHUM107-MACROECONOMICS

(1500 words, excluding figures, tables, and diagrams)

Directions:

Visit the following [website](#) and set the configuration **RANK** as shown in the image below:

Based on the last two digits of your registration number chose the country associated with that rank on the aforementioned website. Example: if your registration number ends with 45, that should give you Chile on the website. If your number does not appear on the list, chose + or - 1. Example: 6 does not appear so you may choose 5 or 7.

Now, chose another country with the rank + or – 20 with respect to the country chosen earlier. In this case Luxembourg (25) or Belarus (65). After you have your two countries, do the following:

- Critically look at the Gross National Income and Per Capita Income of the two countries together based on the data for latest three years.
- Talk also about inflation in these two economies over three years.

*You will get the data on these variables from **world bank** website. Use graphics, numbers, diagrams as much as you can but it will not be counted towards the total word count.*

The last date for report submission is 30th October. You must be prepared with your **ppts by 5th October**. You don't need to submit the report at the time of presentation. You may submit the final report on or before 30th October.

STARTING 5th OCTOBER, YOU WILL BE REQUIRED TO PRESENT YOUR ppts IN CLASS hours AND THAT WILL BE 25 PERCENT OF THE MAX. MARKS. You will get 10 minutes to present. And the order of presentations will be generated randomly.

Note: No grouping is allowed. All of you are required to make and present your reports alone.
